## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-13, drawn to an attaching apparatus, classified in class 224, subclass 148.
  - II. Claims 14-17, drawn to a container, classified in class 220, subclass 676.
  - III. Claims 18, drawn to a combination of container/attaching apparatus, classified in class 220, subclass 737.
  - IV. Claims 19, drawn to a mixing container, classified in class 206, subclass 219

The inventions are distinct, each from the other because of the following reasons:

2. Inventions III, II, and I are related as combination (III) and subcombinations (I, II).

Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination as claimed does not require the particulars of the subcombinations, i.e., in the combination holding apparatus/container, the holding apparatus can be used to hold other contents, i.e., cell phones, tools, and the container can be hold by other known apparatus, i.e., shoulder straps, cover with handles, etc. Furthermore, each of the subcombinations has separate utility, i.e., the holder can be used to hold other contents, and the container can be used to hold other types of contents.

Art Unit: 3727

3. Inventions II and I are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I and II has separate utilities as holders and containers. See MPEP § 806.05(d).

4. Invention IV is unrelated to the inventions of I-III. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case invention IV, related to mixing container has different functionalities compared to inventions of I-III.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
